Fiber Optic Cleaning Kits

Inspect, Clean, Inspect with Top Quality Cleaners & Tools

Did you know?

Just one particle, when mated, can cause end-face damage, insertion loss or back reflection.

Particles can spread, break apart and alter signal performance to cause permanent damage. The only way to mate contamination and defect-free connectors is to clean and inspect both sides. Dust, residue and other particulate can only be seen by a microscope.

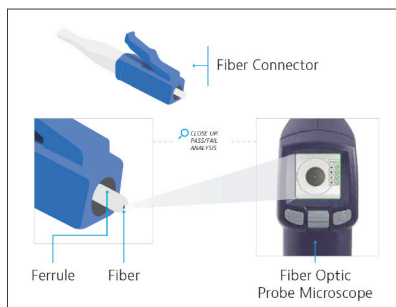

For Best Results:

Always INSPECT, CLEAN & INSPECT before connecting.

Sticklers Fiber Optic Cleaners has specially designed kits with quality fiber inspection and cleaning tools to help you get the best results.
