

Top Reasons to Use Stereze™ Hand Sanitizers

FDA Registered

MicroCare manufacturing facilities are FDA registered for the manufacture of alcohol-based sanitizers, and all Stereze™ Hand Sanitizer products are registered with the FDA under the OTC drug monograph. Each of the Stereze brand hand sanitizer products has a unique National Drug Code (NDC) number, which is required by the FDA and assures you that Stereze hand sanitizers are fully compliant with all FDA regulations.

Safe to Use

Stereze Hand Sanitizers contain no harmful or toxic ingredients like bleach or methanol. They are also free from parabens, dyes, sulfates and phthalates. They are made with high-purity alcohol and water that don't leave particles or a sticky residue behind.

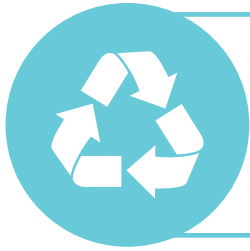

Tested and Proven

Stereze Hand Sanitizers are lab tested and proven to be effective at sanitizing hands. Only the highest purity alcohol is sourced to ensure no product contamination, unusual odors or unsafe impurities. Routine quality control testing is performed on Stereze products to ensure their continued safety and effectiveness.

High Quality Fabric Wipes

The premium fabric wipes are thick, soft, ultra-strong and tear-resistant. The presaturated wipes come in tight sealing containers to help keep the wipes wet and ready for use. The 100-count tubs feature a unique spring-loaded “slam-shut” lid that automatically snaps closed after each wipe dispenses, prolonging the shelf life of the wipes after the factory seal is broken.

Environmentally Responsible

Large count buckets reduce the number of tubs going to the landfill. Foil refill packs let you save the containers for reuse. Plus, the containers are 100% recyclable.

Multi-Purpose

Use in any area where you need help to keep staff, students, patients and customers safe including medical offices, schools, fitness centers, restaurant kitchens, offices and hotels. Put them in conference rooms, class rooms, break rooms, rest rooms, exam rooms and more.

No Fragrance Added

Only the highest purity alcohol is sourced for Stereze hand sanitizers. The light alcohol scent dissipates quickly as the sanitizing fluid evaporates. They do not produce any toxic chemical fumes or have a harsh chemical smell that can trigger allergies or asthma.

Saves Time & Money

Higher wipe count 100-wipe tubs or 800-count buckets helps ensure you won't run out of wipes. It also means fewer re-orders and less time spent restocking.

Made in USA by a Company You Can Trust

Made in the USA by MicroCare (ISO 9001:2015 Registered), a trusted name in critical cleaning with 35+ years of experience. Order with confidence and a 100% satisfaction guarantee.
